DETAILED ACTION

- 1. The Amendment of 11 August 2006 has been considered, but is not convincing.
- 2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Claim Rejections - 35 USC § 102

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

- 3. Claims 1-6, 16-17, 19-21, 23-28, 38-39, 41-43 are rejected under 35
- U.S.C. 102(a) as being anticipated by Wright et al (4,802,218).

As per Claim 1.

Wright et al ('218) discloses:

- a memory for storing accounting data concerning postage dispensation, the accounting data varying with the transactions, see figure 4 and column 3, lines 15-59 and column 6, lines 30-39;
- a plurality of identical processors, each processor being associated with a different subset of the transactions, wherein each processor is periodically engaged in a multiplexed manner to take turns verifying the accounting data for each transaction in the subset associated with the processor, see column 6, lines 30-63 and figure 7 (multiple user cards) and column 10, lines 2-58.

As per Claim 2, 25.

Art Unit: 3628

Wright et al ('218) further discloses accounting data includes an amount of a fund available for the postage dispensation, see column 7, lines 52-55.

As per Claim 3, 26.

Wright et al ('218) further discloses the accounting data includes a cumulative amount of postage dispensation, see column 7, lines 52-55 and column 10, lines18-21.

As per Claim 4, 19, 27, 41.

Wright et al ('218) further discloses the accounting data includes indices for identifying the transactions, see column 8, line 55.

As per Claim 5.

Wright et al ('218) further discloses the memory includes a non-volatile memory, see column 6, lines 11-18.

As per Claim 6, 28.

Wright et al ('218) further discloses each processor also stores records concerning the transactions in the subset associated with the processor, see column 8, line 55.

As per Claim 16.

Wright et al ('218) discloses:

an interface for receiving a postage value for each transaction of the sequence, see column 8, lines 8-13 and column 9, lines 30-32;

a first processor for generating an ensemble of information for each transaction containing data derived from at least the postage value for each transaction, see column 9, lines 25-42;

a plurality of identical second processors, see column 7, lines 33-51 and figure 7 (multiple user cards);

a mechanism for providing each ensemble to a selected one of the second processors, the selected second processor generating at least one of the data elements of a postage indicium from the ensemble, wherein each of the second processors is periodically engaged in a multiplexed manner to take turns generating the data elements corresponding to each ensemble, see column 10, lines 2-58.

As per Claim 17, 38.

Wright et al ('218) further discloses the data is also derived from postage values in selected transactions prior to the transaction, see column 10, lines 2-21.

As per Claim 20, 42.

Wright et al ('218) further discloses the ensemble of information also contains second data concerning an increased amount of a fund available for postage dispensation, see column 10, lines 18-21 and column 5, lines 10-14.

Application/Control Number: 09/674,947

Art Unit: 3628

As per Claim 21, 43.

Wright et al ('218) further discloses the at least one of the data elements includes a code for authenticating the postage indicium, see column 4, lines 51-59.

As per Claim 24.

Wright et al ('218) discloses:

storing accounting data concerning postage dispensation, the accounting data varying with the transactions, see figure 4 and column 3, lines 15-59 and column 6, lines 30-39;

verifying by each processor the accounting data for at least the transactions in the subset associated with the processor, wherein each processor is periodically engaged in a multiplexed manner to take turns verifying the accounting data for each transaction in the subset associated with the processor see column 6, lines 30-63, column 10, lines 2-58 and figure 7 (multiple user cards).

As per Claim 38.

Wright et al ('218) discloses:

receiving a postage value for each transaction of a sequence, see column 9, lines 25-42;

generating by the first processor an ensemble of information for each transaction containing data derived from at least the postage value for each transaction, see column 9, lines 25-42;

providing each ensemble to a selected one of the second processors, the selected second processor generating at least on of the data elements of a postage indicium from the ensemble, wherein each of the second processors is periodically engaged in a multiplexed manner to take turns generating elements corresponding to each ensemble, see column 10, lines 2-58 and figure 7 (multiple user cards).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 22, 23, 44, 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wright et al (4,802,218) in view of Pintsov (5,586,036).

As per Claim 22, 44.

Application/Control Number: 09/674,947

Art Unit: 3628

Wright et al ('218) does not disclose the code includes a digital signature, Pintsov ('036) teaches electronic signatures as part of the data of the postage indicium, see column 11, lines 1-67 for authentication of a mailpiece in a postage system.

Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made to include a digital signature in the postage indicium for the benefit of authentication of a mailpiece in a postage system.

As per Claim 23, 45.

Wright et al ('218) does not disclose digital signature being derived from the subset of the data elements.

Pintsov ('036) teaches electronic signatures derived from a subset of the data elements, see column 11, lines 1-67 for authentication of a mailpiece in a postage system.

Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made to derive a digital signature from a subset of the data elements for the benefit of authentication of a mailpiece in a postage system.

5. Claims 18, 40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wright et al (4,802,218) in view of Official Notice.

As per Claim 18, 40.

Wright et al ('218) discloses limitations on the cards by the card issuer, such as maximum postage amount or class of postage for each transaction or cumulative total transactions, see column 10, lines18-21, but does not disclose the number of selected transactions is a function of the number of second processors.

Official Notice is taken that if the manufacturer puts a cumulative total transaction limitation on each card that the number of transactions would, by definition be a function of the number of cards (second processors).

Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made that if the manufacturer puts a cumulative total transaction limitation on each card that the number of transactions would, by definition be a function of the number of cards (second processors).

Prior Art of Record

6. The prior art of record:

- 1) Haruki et al (4,632,252) or Szewerenko et al disclose assigning tasks within a processing system to various units based on the operational demands of the system.
- 2) Kanehara (JP 11-27311 A) discloses the use of a number of different encryption devices, the inclusion of an indication of the encryption device used in the

Page 5

Application/Control Number: 09/674,947

Art Unit: 3628

transmitted information and the selection of a decryption device based on information contained in the transmitted information.

3) Cordery et al (6,073,125) discloses the selection of one of a number of authentication units based on the key used to produce the authentication information

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas A. Dixon whose telephone number is (571) 272-6803. The examiner can normally be reached on Monday - Thursday 6:30 - 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Hayes can be reached on (571) 272-6708. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
